My complaints about this course probably mostly stem from me not being a very mathematically minded person (and finding the content pretty uninteresting), if that makes sense. It seems like the only thing I took away from this course is that you can never really be sure about any statistic. There are about 100 different ways of coming to that conclusion. It just doesn't click with me.

The homework, test, and quiz answers are always worded in very confusing ways. It seems like every other question is a trick question. I've completed many of the tests by keeping a notepad of what answers are the correct answers, and taking the tests numerous times. It's extremely frustrating, because you have to get a certain grade to unlock the next assignment sometimes.

And what's with the George Orwell "1984" telescreen quizzes? Why does somebody have to watch me take the quizzes? Why this class, out of all of them? Seems so arbitrary.

---

Professor Kuhn is extremely knowledgeable in his field, and he relates the somewhat complicated material in ways that the student can comprehend it. I thoroughly enjoyed this class because of the way it was taught. I would definitely take the next level of statistics if Professor Kuhn taught it.

---

Quizzes in this course should be more than 5 questions. Giving the students 5 questions does not accurately reflect their comprehension. An appropriate amount would be 10 questions since that is the amount of questions on the practice quiz. This teacher often communicated with the students in a manner that conveyed condescension.
